DalilDZ

OPEN SOURCE · ALGERIA · EVIDENCE FIRST

Verify business claims. Keep the evidence.

An open-source evidence engine for verifying Algerian businesses — suppliers, vendors and merchants — with a full audit trail and **no trust score**.

github.com/dinogx99/DalilDZ · Apache-2.0

THE PROBLEM

Vendor checks end up as a folder of invoices, screenshots and notes.

Collecting more data is not the hard part. Keeping enough **provenance** to answer simple questions later is.

> “Is the NIF on this invoice the same one the supplier gave us — and who checked it, when, and how?”

- Where did this RC number come from?
- Did the invoice and the supplier record contain the same NIF?
- Is “SARL” vs “S.A.R.L.” punctuation — or a real SARL/EURL conflict?
- Was a field missing, or was the source itself down?
- Was the result an exact rule or a fuzzy guess?
- Can another reviewer reproduce it next month?

THE SOLUTION

DalilDZ turns verification into a structured evidence trail.

01
Submit claims
Company name, RC, NIF, NIS, legal form, wilaya, website, phone, email

02
Add documents
PDF / JPG / PNG / WebP. Text extracted with page & position; SHA-256 fingerprint

03
Collect evidence
Company website, DNS, TLS, RDAP, and manual checks on official sources (CNRC)

04
Deterministic checks
Exact identifier matching and explainable normalized comparisons

05
Auditable report
JSON · CSV · printable HTML/PDF with an immutable input fingerprint

WHAT
was checked
Every finding names the field, the submitted value and the observed value.

AGAINST WHAT
which source
Document hash and page, website URL and snapshot hash, or official source.

HOW
which method
Exact rule, Algerian normalization, or similarity score — with a plain explanation.

HONEST RESULTS

Eight precise statuses. No “trusted” or “fraud” label.

VERIFIED	Matches comparable evidence under a deterministic rule
CONSISTENT	Compatible with evidence, not an authoritative verification
CONFLICTING	Comparable values disagree
NOT FOUND	A working source was searched, nothing found
NOT VERIFIABLE	No evidence path for this field
SOURCE UNAVAILABLE	The source failed — never silently turned into “not found”
OUTDATED	Evidence is outside its freshness window
MANUAL REVIEW REQUIRED	A human or official manual check is needed

EXAMPLE

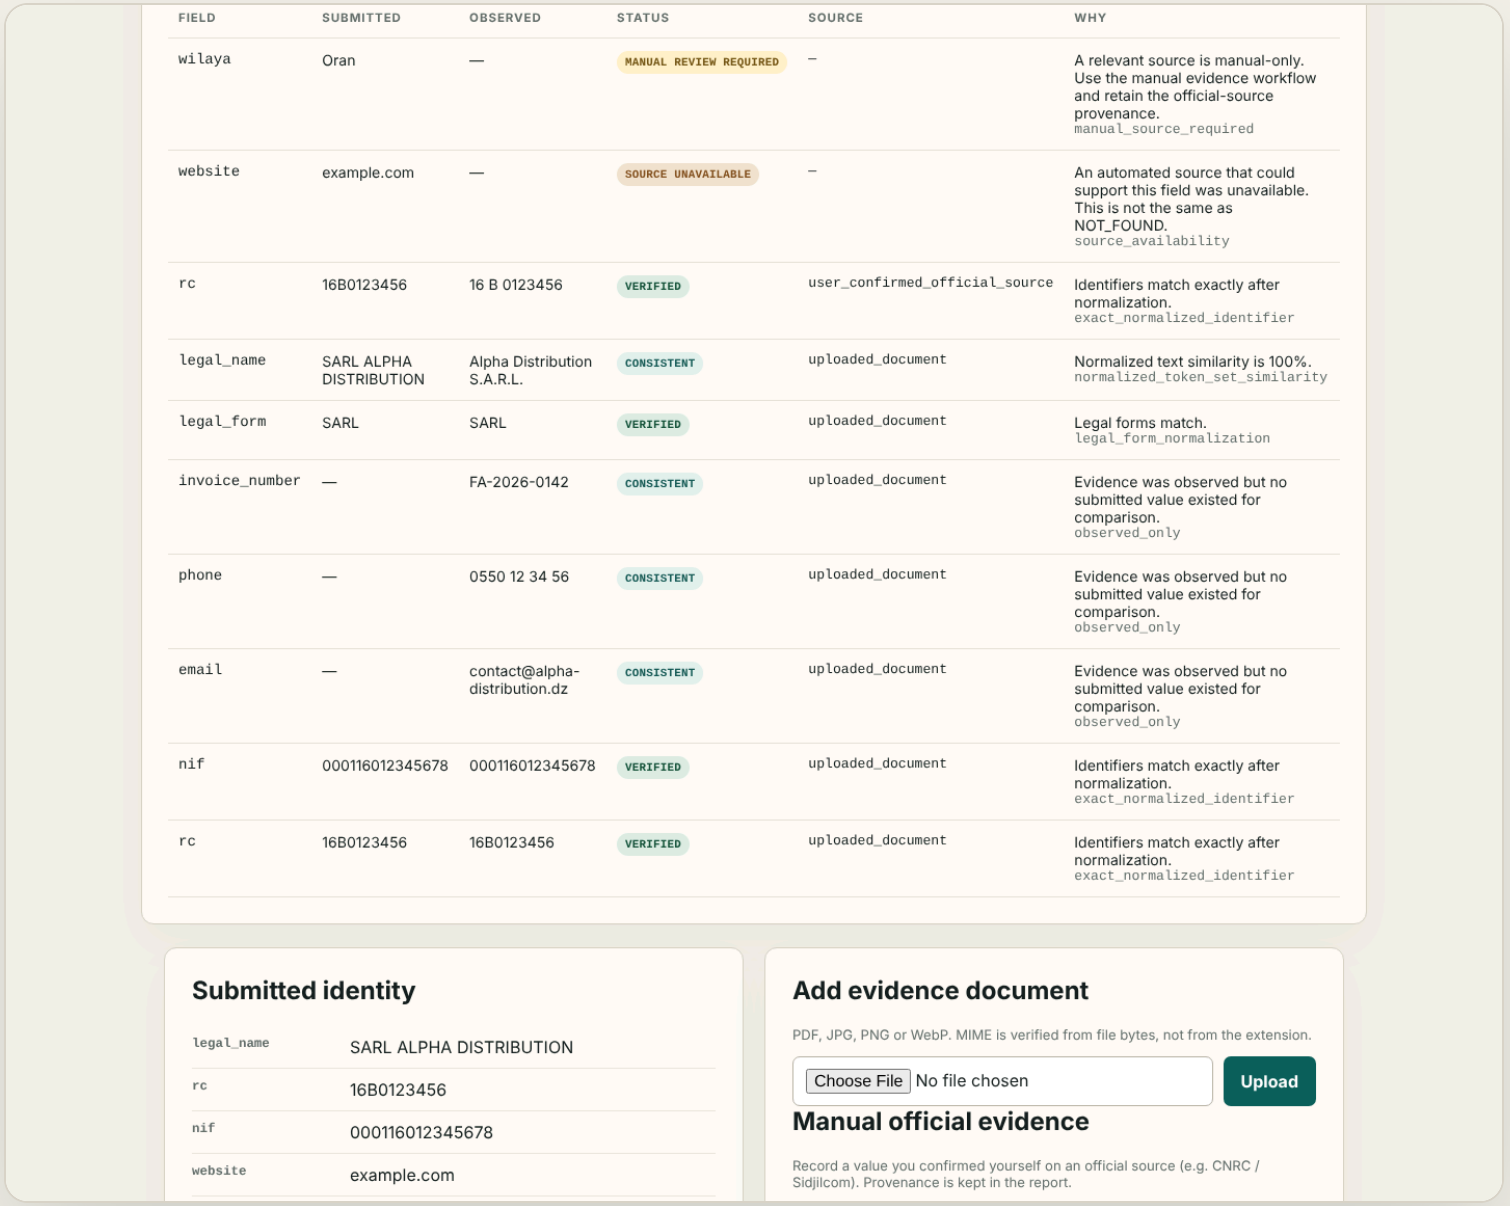

FIELD	SUBMITTED	OBSERVED	STATUS
name	SARL ALPHA DISTRIBUTION	Alpha Distribution S.A.R.L.	CONSISTENT
rc	16B0123456	16 B 0123456	VERIFIED
wilaya	Oran	Alger	CONFLICTING

> This is a statement about the *information supplied* — not a verdict on whether the company is legitimate.

PRODUCT TOUR · VERIFICATION CASE

Every finding traces back to its evidence.

- Status summary at a glance
- Submitted vs observed value, source and method
- Upload documents; claims extracted automatically
- Record manual checks on official sources (CNRC / Sidjilcom)
- Full analysis history and audit timeline

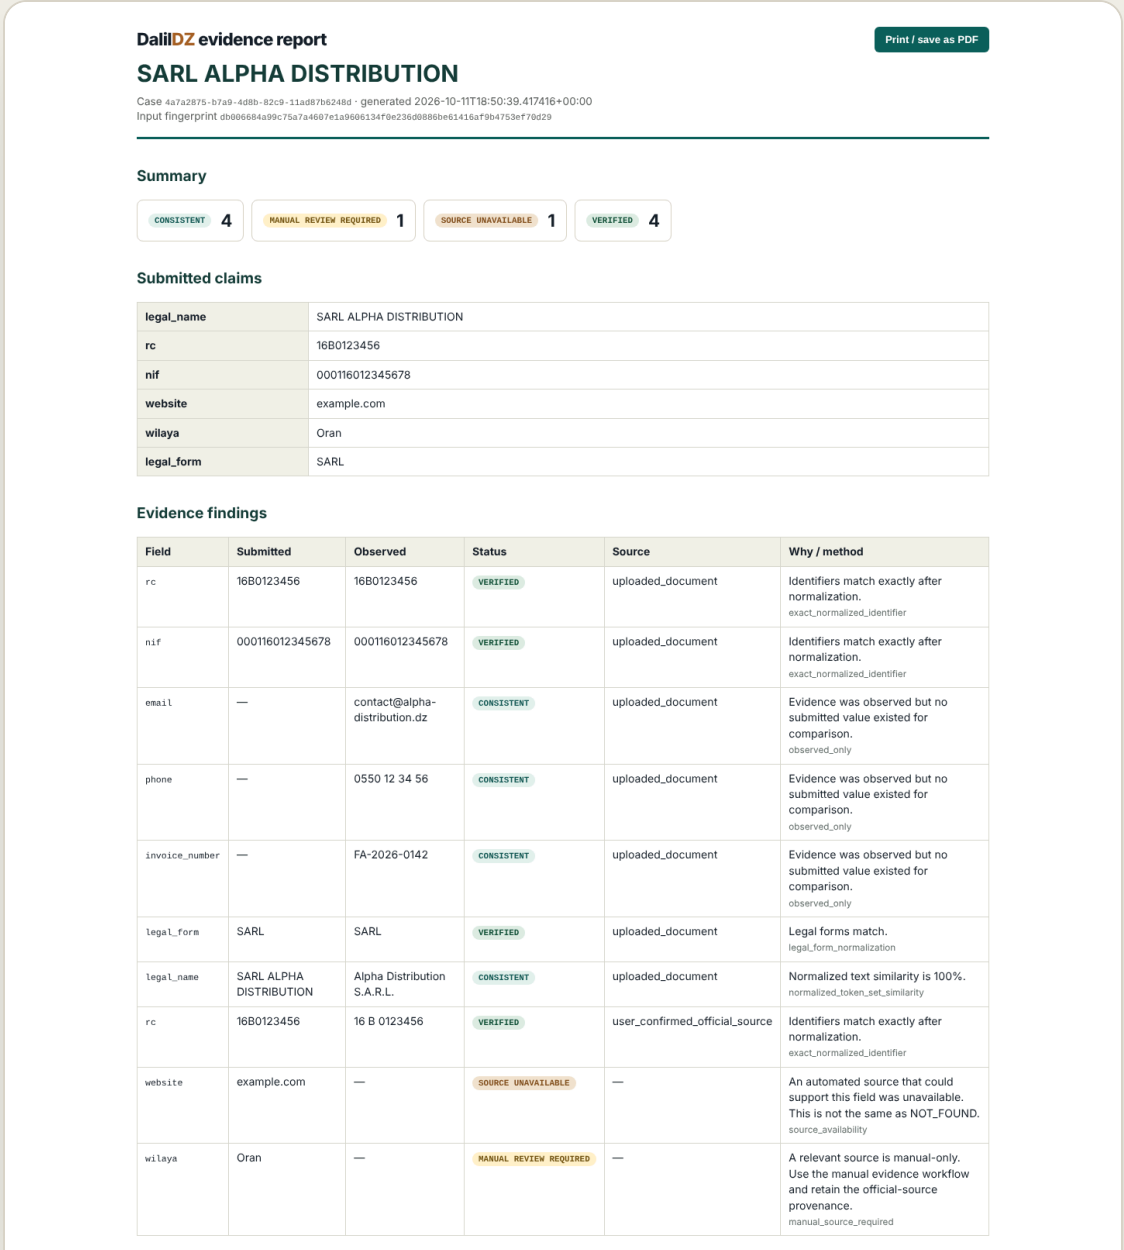

FIELD	SUBMITTED	OBSERVED	STATUS	SOURCE	WHY
wilaya	Oran	—	MANUAL REVIEW REQUIRED	–	A relevant source is manual-only. Use the manual evidence workflow and retain the official-source provenance. manual_source_required
website	example.com	—	SOURCE UNAVAILABLE	–	An automated source that could support this field was unavailable. This is not the same as NOT_FOUND. source_availability
rc	16B0123456	16 B 0123456	VERIFIED	user_confirmed_official_source	Identifiers match exactly after normalization. exact_normalized_identifier
legal_name	SARL ALPHA DISTRIBUTION	Alpha Distribution S.A.R.L.	CONSISTENT	uploaded_document	Normalized text similarity is 100%. normalized_token_set_similarity
legal_form	SARL	SARL	VERIFIED	uploaded_document	Legal forms match. legal_form_normalization
invoice_number	—	FA-2026-0142	CONSISTENT	uploaded_document	Evidence was observed but no submitted value existed for comparison. observed_only
phone	—	0550 12 34 56	CONSISTENT	uploaded_document	Evidence was observed but no submitted value existed for comparison. observed_only
email	—	contact@alpha-distribution.dz	CONSISTENT	uploaded_document	Evidence was observed but no submitted value existed for comparison. observed_only
nif	000116012345678	000116012345678	VERIFIED	uploaded_document	Identifiers match exactly after normalization. exact_normalized_identifier
rc	16B0123456	16B0123456	VERIFIED	uploaded_document	Identifiers match exactly after normalization. exact_normalized_identifier

PRODUCT TOUR · EVIDENCE REPORT

A report another reviewer can reproduce.

Each analysis is stored as a new historical snapshot. Re-running on the same inputs produces the same **input fingerprint**.

- Summary, submitted claims and every finding with its method
- Sources consulted, their health and limitations
- Documents with SHA-256 hashes
- Export as JSON, CSV, or print / save as PDF
- Clear disclaimer: no trust, solvency or fraud judgment

DalilDZ evidence report

Print / save as PDF

Summary

CONSISTENT 4 · MANUAL REVIEW REQUIRED 1 · SOURCE UNAVAILABLE 1 · VERIFIED 4

Submitted claims

legal_name	SARL ALPHA DISTRIBUTION
rc	16B0123456
nif	000116012345678
website	example.com
wilaya	Oran
legal_form	SARL

Evidence findings

Field	Submitted	Observed	Status	Source	Why / method
rc	16B0123456	16B0123456	VERIFIED	uploaded_document	Identifiers match exactly after normalization. exact_normalized_identifier
nif	000116012345678	000116012345678	VERIFIED	uploaded_document	Identifiers match exactly after normalization. exact_normalized_identifier
email	—	contact@alpha-distribution.dz	CONSISTENT	uploaded_document	Evidence was observed but no submitted value existed for comparison. observed_only
phone	—	0550 12 34 56	CONSISTENT	uploaded_document	Evidence was observed but no submitted value existed for comparison. observed_only
invoice_number	—	FA-2026-0142	CONSISTENT	uploaded_document	Evidence was observed but no submitted value existed for comparison. observed_only
legal_form	SARL	SARL	VERIFIED	uploaded_document	Legal forms match. legal_form_normalization
legal_name	SARL ALPHA DISTRIBUTION	Alpha Distribution S.A.R.L.	CONSISTENT	uploaded_document	Normalized text similarity is 100%. normalized_token_set_similarity
rc	16B0123456	16 B 0123456	VERIFIED	user_confirmed_official_source	Identifiers match exactly after normalization. exact_normalized_identifier
website	example.com	—	SOURCE UNAVAILABLE	—	An automated source that could support this field was unavailable. This is not the same as NOT_FOUND. source_availability
wilaya	Oran	—	MANUAL REVIEW REQUIRED	—	A relevant source is manual-only. Use the manual evidence workflow and retain the official-source provenance. manual_source_required

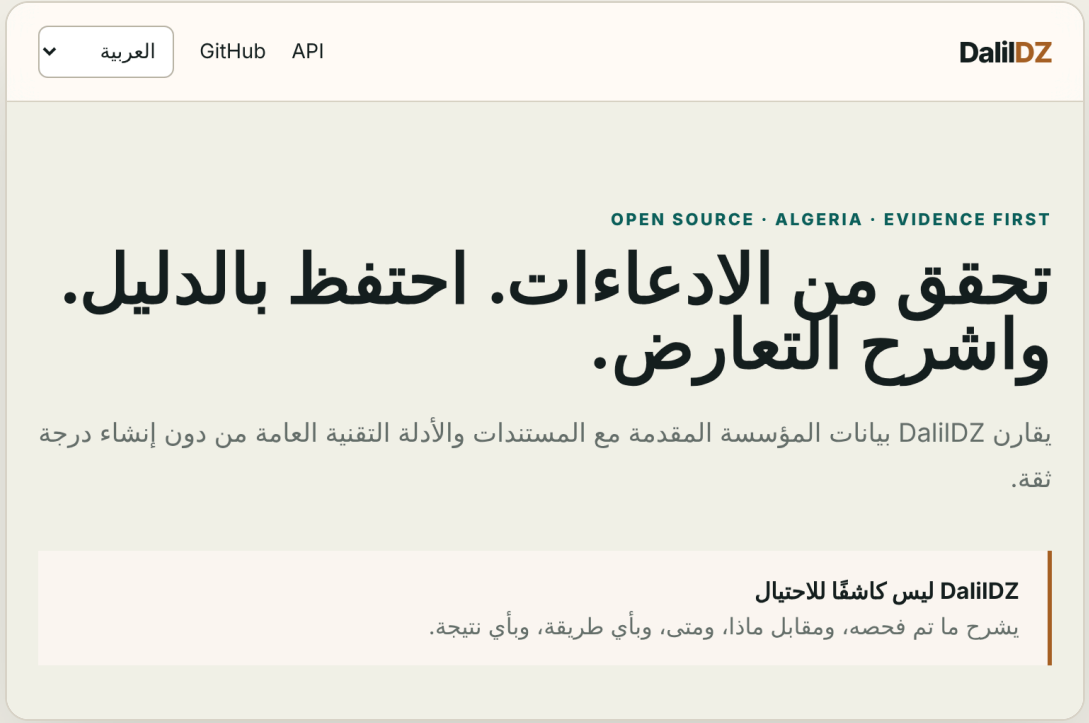

BUILT FOR ALGERIA

Arabic, French and Latin data — normalized explicitly.

INPUT	NORMALIZED
S.A.R.L. Alpha Distribution	`alpha distribution · SARL`
١٦ B ٠١٢٣٤٥٦ (Arabic digits)	`16B0123456`
وهران · 31 · Oran	`Oran`
0550 12 34 56	`+213550123456`
https://WWW.Example.DZ/contact	`example.dz`

- All 58 wilayas in Latin and Arabic, plus numeric codes
- SARL, EURL, SPA, SNC, SCS — abbreviations and full French names
- Arabic diacritics, hamza and tatweel; Arabic→Latin transliteration

Interface in **العربية**, Français and English — with a full right-to-left layout.

DESIGN PRINCIPLES

What makes DalilDZ different

01

Evidence, not reputation

Reports evidence states. Never labels a company safe, fraudulent or trustworthy.

02

Deterministic first

RC, NIF, NIS, legal form and wilaya checks are exact rules — no AI needed.

03

Provenance survives

Source, method, document hash, page, retrieval time and snapshot hash are kept.

04

Failure is explicit

A broken source is SOURCE UNAVAILABLE, never silently “not found”.

05

History is not rewritten

A refresh creates a new analysis; earlier reports stay intact.

06

Lawful by design

No CAPTCHA bypass or scraping of official registries. Manual-only sources stay manual.

ARCHITECTURE

A modular, self-hostable stack

CLIENTS

- **Web app**
  Next.js · React · AR/FR/EN · RTL
- **REST API + OpenAPI**
  Swagger docs at /docs
- **dalildz CLI**
  doctor · verify · document · report
- **MCP server**
  7 tools for AI assistants

EVIDENCE ENGINE · FASTAPI + CELERY

- **Document ingestion**
  MIME from bytes · PDF text · optional OCR (PaddleOCR)
- **Algerian normalization & entity resolution**
  Identifiers · legal forms · wilayas · transliteration
- **Verification rules**
  Deterministic comparisons with explanations
- **Reporting**
  Immutable snapshots · JSON · CSV · HTML/PDF
- **Optional AI layer**
  Ollama / OpenAI-compatible · off by default · never overrides rules

SOURCES & STORAGE

- **Company website**
  robots-aware · SSRF-safe · size/time caps
- **DNS · TLS · RDAP**
  technical metadata only
- **CNRC / Sidjilcom**
  manual official workflow
- **PostgreSQL**
  cases · evidence · checks · reports · audit
- **Redis**
  background analysis queue

SECURITY, PRIVACY & QUALITY

Built to handle sensitive commercial documents

46
automated backend tests

10/10
entity-resolution evaluations

0
known dependency vulnerabilities (pip-audit, npm audit)

5
services verified end-to-end with Docker Compose

- File type verified from bytes, upload size limits, SHA-256 fingerprints
- SSRF protection: blocks private, loopback, link-local and cloud-metadata targets
- Redirect re-validation, timeouts and response-size caps
- Security headers, request IDs, rate limiting, non-root containers
- No telemetry, no third-party AI calls by default
- Document content never written to access logs
- CI: lint, type check, tests, evals, production build, full-stack smoke test
- CodeQL, dependency audits and Dependabot

TRY IT

Running in one command

```
# requires Docker
git clone https://github.com/dinogx99/DalilDZ
cd DalilDZ
docker compose up --build

# web app → http://localhost:3000
# API docs → http://localhost:8000/docs
```

Ideal for procurement, accounting, compliance and marketplace teams. CSV/XLSX bulk import handles up to 1,000 vendors at a time.

ROADMAP

- Dedicated OCR image with a tested CPU runtime
- Server-side PDF report generation
- Case search and filtering; reviewer notes and approvals
- Authentication and organization boundaries
- Additional Algerian public sources where lawful documented access exists

DalilDZ

دليل · DALIL = EVIDENCE, GUIDE

Evidence and consistency — not a trust score.

Open source under Apache-2.0. Contributions welcome: Algerian data sources, Arabic/French document fixtures, normalization edge cases, accessibility.

github.com/dinogx99/DalilDZ

DalilDZ does not determine whether an entity is trustworthy, solvent, legitimate, fraudulent, or safe. It reports evidence and inconsistencies found in supplied and publicly available information. All examples use synthetic test data.
